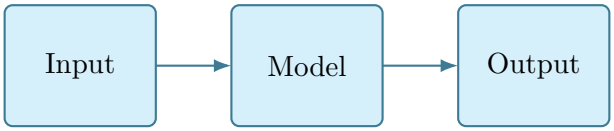
Summit DIG 101: Digital Literacy and Citizenship

Summit fully illustrated textbook edition



Original Summit-authored instructional text generated from the live course runtime, bibliography layer, and assessment structure.

March 22, 2026

@@TOKEN_0@@ Summit first edition draft @@TOKEN_1@@ high-school @@TOKEN_2@@ 1 @@TOKEN_3@@ 14 weeks @@TOKEN_4@@ 6-7 hours each week

Originality note

This textbook is a Summit-authored instructional text. It is informed by the course bibliography in @@TOKEN_0@@ and by open academic references used elsewhere in Summit, but it does not copy or restate any single commercial textbook.

How this textbook was built

This book was generated from the live Summit course runtime for Digital Literacy and Citizenship: the syllabus, lesson sequence, reading chapters, guided practice, homework sets, quizzes, mastery exam, and workload standard. The design goal is to give a student a usable, course-complete book while preserving original Summit wording and sequencing.

Search, source evaluation, productivity tools, online safety, digital ethics, and responsible communication.

Computation chapters should treat code, numerical method, and interpretation as one integrated workflow.

This volume is structured as a teaching book rather than a bare note pack. Every chapter contains explanation, worked examples, guided practice, chapter homework, and a rear answer key so the student can study independently and still get disciplined feedback.

Course use guide

- Read one chapter at a time in sequence; each chapter is aligned to a live lesson block in the course workspace.
- Rebuild the worked examples before attempting the graded homework or quiz material.
- Keep a scratch notebook beside the text and write down assumptions, diagrams, and the points where you usually get stuck.
- Use the course tutor, guided practice, and homework only after you can explain the chapter in your own words.

Course map

- 4 live lesson chapters
- 4 graded homework checkpoints
- 2 timed quizzes
- 1 cumulative mastery exam
- 4 declared course outcomes

Prerequisite and readiness position

This course is a gateway course in the current Summit sequence.

Semester workload standard

Summit runtime workload label: 6-7 hours each week.

Reference basis

Primary synthesis anchors from the bibliography for this course (50 listed references total):

1. Think Python
2. Data Structures and Algorithms in Python
3. Clean Code
4. Software Engineering
5. Database System Concepts
6. Programming for Engineers
7. Matlab Programming for Engineers (Ise)
8. C Programming: The Essentials for Engineers and Scientists

Chapter 1

Chapter 1 Foundations and language

Chapter purpose

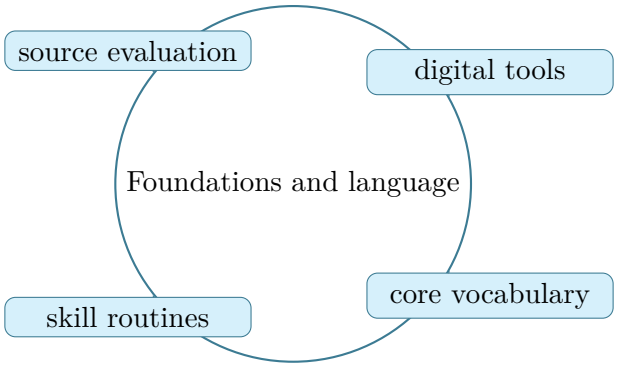
Introduce the baseline language, vocabulary, and structures that students need before Digital Literacy and Citizenship can become fluent and flexible.

This chapter sits at the opening of Digital Literacy and Citizenship. It develops source evaluation, digital tools, core vocabulary, and skill routines so that the student can move from explanation to execution without losing the thread of the course.

The point of this chapter is not just to make a script run. Students should understand what the algorithm assumes, how errors enter, what outputs are trustworthy, and how computational choices support engineering decisions. The chapter therefore pairs implementation with explanation at every stage.

Core ideas

- source evaluation
- digital tools
- core vocabulary
- skill routines



How to think through this chapter

A good method in this family begins with problem formulation, then moves to data structures or numerical steps, and ends with verification and interpretation. Students should expect to justify algorithm choice, check boundary cases, and explain what the output means in domain language.

When working this chapter, keep the following question active: @@TOKEN_0@@ A good student answer should connect setup, assumptions, and conclusion instead of only chasing a final number or sentence.

Introduce the baseline language, vocabulary, and structures that students need before Digital Literacy and Citizenship can become fluent and flexible.

Why Foundations and language matters in Digital Literacy and Citizenship

Foundations and language is not just another topic block. It is where students learn to organize their thinking so that source evaluation becomes a deliberate tool instead of a memorized step list.

Summit treats this lesson as applied reasoning: students should be able to say what the model is doing, what assumptions it needs, and why the conclusion would hold up under review.

How strong students move through this material

The strongest approach is to begin with the governing idea, then connect it to the problem setup, and only then carry out the detailed work. In this lesson that usually means centering source evaluation before letting algebra, computation, or design detail take over.

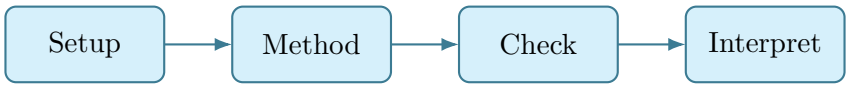
When digital tools enters the picture, the student should already know what variables, constraints, or interpretations matter. That prevents the work from collapsing into disconnected steps.

What to watch for when the work gets harder

core vocabulary usually separate surface familiarity from real mastery. This is where students need to slow down, keep notation disciplined, and explain why the method choice still fits the problem.

A top-quality solution is not just correct. It is organized, explicit about assumptions, and clear enough that another engineer or instructor could audit the logic without guessing what was meant.

Worked example



@@TOKEN_0@@ Outline a complete digital literacy and citizenship approach that uses source evaluation to reason through digital tools.

1. Start by identifying the governing principle behind source evaluation and state the assumptions that make it valid in this setting.
2. Define the variables, coordinate choices, constraints, or design criteria that control digital tools.
3. Carry the method through in a disciplined sequence, showing where source evaluation shapes the setup and intermediate steps.
4. Close with an engineering interpretation that explains what the result means and why the conclusion is reasonable.

Read this example twice: once for the flow of ideas and once for the technical structure of the solution.

Worked-through guided example

@@TOKEN_0@@ Work a digital literacy and citizenship problem built around source evaluation. Explain the setup, the governing method, and the final conclusion you would defend.

1. State why source evaluation is the controlling idea in this problem.
2. List the variables, assumptions, and governing relationships before trying to solve.
3. Carry the reasoning forward in a clean sequence and end with a technical interpretation.

A complete solution begins from source evaluation, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

Instructor commentary

Students should annotate this chapter for structure, not just facts. Mark where the argument changes direction, where the method requires a hidden assumption, and where the conclusion becomes more general than the worked example. If the chapter feels easy while you are reading it but difficult when you close the page, you have not yet converted recognition into mastery.

The most productive study pattern is read the concept, implement a small version, test it on a simple case, and then scale to a more realistic example with written reflection.

Practice while you read

Foundations and language guided practice

Introduce the baseline language, vocabulary, and structures that students need before Digital Literacy and Citizenship can become fluent and flexible.

@@TOKEN_0@@ Work a digital literacy and citizenship problem built around source evaluation. Explain the setup, the governing method, and the final conclusion you would defend.

- Hint: Return to the key idea source evaluation and identify what assumptions, variables, or constraints must be fixed before you work forward.
- Step 1: State why source evaluation is the controlling idea in this problem.
- Step 2: List the variables, assumptions, and governing relationships before trying to solve.
- Step 3: Carry the reasoning forward in a clean sequence and end with a technical interpretation.
- Checkpoint: A strong checkpoint answer identifies source evaluation, builds a disciplined setup, and defends a final conclusion.

@@TOKEN_0@@ Work a digital literacy and citizenship problem built around digital tools. Explain the setup, the governing method, and the final conclusion you would defend.

- Hint: Return to the key idea digital tools and identify what assumptions, variables, or constraints must be fixed before you work forward.
- Step 1: State why digital tools is the controlling idea in this problem.
- Step 2: List the variables, assumptions, and governing relationships before trying to solve.
- Step 3: Carry the reasoning forward in a clean sequence and end with a technical interpretation.
- Checkpoint: A strong checkpoint answer identifies digital tools, builds a disciplined setup, and defends a final conclusion.

Chapter homework

@@TOKEN_0@@ Introduce the baseline language, vocabulary, and structures that students need before Digital Literacy and Citizenship can become fluent and flexible.

1. Complete a full digital literacy and citizenship problem centered on source evaluation. State the setup, the governing method, and the engineering conclusion you would defend.
2. Complete a full digital literacy and citizenship problem centered on digital tools. State the setup, the governing method, and the engineering conclusion you would defend.
3. Complete a full digital literacy and citizenship problem centered on core vocabulary. State the setup, the governing method, and the engineering conclusion you would defend.
4. Complete a full digital literacy and citizenship problem centered on skill routines. State the setup, the governing method, and the engineering conclusion you would defend.

Answers for these homework problems appear in the back-of-book answer key.

Chapter summary and study notes

- Explain when source evaluation is the right tool and when it is not.
- Carry a full solution or analysis from setup to conclusion without skipping assumptions.
- Use notation, units, and technical language clearly enough for formal grading.

Study tips

- Name the governing idea first: source evaluation.
- Write down assumptions and constraints before pushing through calculations or design choices.
- End every serious solution with a technical interpretation, not only a final number or label.

Common traps

- Jumping into symbol manipulation before the governing model is clear.
- Treating the procedure like a script instead of checking whether the assumptions still hold.
- Stopping at the answer line without explaining what the result means in context.

Family-level errors to watch for

- Treating code execution as proof that the method is correct.
- Skipping verification, units, or error checks.
- Reporting raw output without explaining what it means for the underlying problem.

Chapter 2

Chapter 2 Reasoning and structure

Chapter purpose

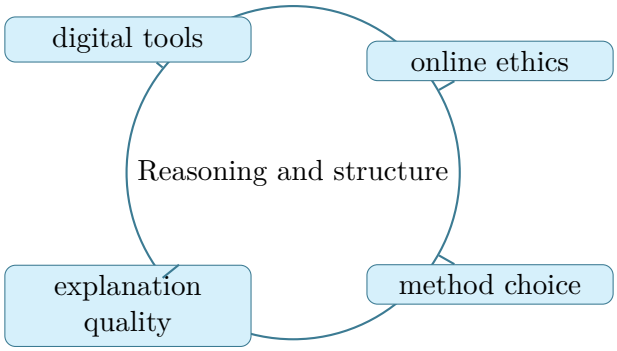
Move beyond vocabulary into the deeper patterns, methods, and reasoning moves that organize Digital Literacy and Citizenship.

This chapter sits in the middle of Digital Literacy and Citizenship. It develops digital tools, online ethics, method choice, and explanation quality so that the student can move from explanation to execution without losing the thread of the course.

The point of this chapter is not just to make a script run. Students should understand what the algorithm assumes, how errors enter, what outputs are trustworthy, and how computational choices support engineering decisions. The chapter therefore pairs implementation with explanation at every stage.

Core ideas

- digital tools
- online ethics
- method choice
- explanation quality



How to think through this chapter

A good method in this family begins with problem formulation, then moves to data structures or numerical steps, and ends with verification and interpretation. Students should expect to justify algorithm choice, check boundary cases, and explain what the output means in domain language.

When working this chapter, keep the following question active: @@TOKEN_0@@ A good student answer should connect setup, assumptions, and conclusion instead of only chasing a final number or sentence.

Move beyond vocabulary into the deeper patterns, methods, and reasoning moves that organize Digital Literacy and Citizenship.

Why Reasoning and structure matters in Digital Literacy and Citizenship

Reasoning and structure is not just another topic block. It is where students learn to organize their thinking so that digital tools becomes a deliberate tool instead of a memorized step list.

Summit treats this lesson as applied reasoning: students should be able to say what the model is doing, what assumptions it needs, and why the conclusion would hold up under review.

How strong students move through this material

The strongest approach is to begin with the governing idea, then connect it to the problem setup, and only then carry out the detailed work. In this lesson that usually means centering digital tools before letting algebra, computation, or design detail take over.

When online ethics enters the picture, the student should already know what variables, constraints, or interpretations matter. That prevents the work from collapsing into disconnected steps.

What to watch for when the work gets harder

method choice usually separate surface familiarity from real mastery. This is where students need to slow down, keep notation disciplined, and explain why the method choice still fits the problem.

A top-quality solution is not just correct. It is organized, explicit about assumptions, and clear enough that another engineer or instructor could audit the logic without guessing what was meant.

Chapter 5

Quiz review and official exam preparation

Homework structure

- Homework Set 1: Foundations and language: 4 graded problems attached to chapter 1.
- Homework Set 2: Reasoning and structure: 4 graded problems attached to chapter 2.
- Homework Set 3: Application and communication: 4 graded problems attached to chapter 3.
- Homework Set 4: Cumulative mastery: 4 graded problems attached to chapter 4.

Quiz structure

- Quiz 1: Foundations and language and Reasoning and structure: 4 questions, timed, and single-attempt in the live course. Quiz 1 should be taken only after you can solve the chapter homework without outside prompts.
- Quiz 2: Application and communication and Cumulative mastery: 4 questions, timed, and single-attempt in the live course. Quiz 2 should be taken only after you can solve the chapter homework without outside prompts.

Official mastery exam

- Digital Literacy and Citizenship cumulative mastery exam: 5 major questions, High rigor, first official attempt locks the course grade.

Digital Literacy and Citizenship cumulative mastery exam preparation checklist

- Review every lesson in Digital Literacy and Citizenship and be able to explain why each method is used, not only how it is executed.

- Practice complete written solutions, because Summit grades setup quality, assumptions, and interpretation directly.
- Use the guided practice and quizzes until you can explain the method flow without outside prompts.
- Expect the official exam to combine method choice, disciplined setup, and a defended conclusion in the same answer.

How to use this book before assessment

- Read the relevant chapter and rebuild both worked examples without looking.
- Solve the guided practice in the chapter before attempting the graded homework.
- Check your chapter-homework answers only after you complete a full written attempt.
- Review the quiz answer key after each chapter block and classify your errors by concept, setup, algebra, or interpretation.
- Before the official exam, revisit the chapter purposes, homework corrections, and answer-key notes rather than rereading formulas only.

Chapter 7

Back-of-book answers and solution outlines

Guided practice answer key

Chapter 1: Foundations and language

@@TOKEN_0@@

1. Work a digital literacy and citizenship problem built around source evaluation. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies source evaluation, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from source evaluation, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around digital tools. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies digital tools, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from digital tools, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around core vocabulary. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies core vocabulary, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from core vocabulary, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

Chapter 2: Reasoning and structure

@@TOKEN_0@@

1. Work a digital literacy and citizenship problem built around digital tools. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies digital tools, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from digital tools, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around online ethics. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies online ethics, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from online ethics, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around method choice. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies method choice, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from method choice, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

Chapter 3: Application and communication

@@TOKEN_0@@

1. Work a digital literacy and citizenship problem built around online ethics. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies online ethics, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from online ethics, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around information management. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies information management, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from information management, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around application. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies application, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from application, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

Chapter 4: Cumulative mastery

@@TOKEN_0@@

1. Work a digital literacy and citizenship problem built around review. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies review, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from review, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around synthesis. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies synthesis, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from synthesis, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

1. Work a digital literacy and citizenship problem built around mixed practice. Explain the setup, the governing method, and the final conclusion you would defend.

- Checkpoint answer: A strong checkpoint answer identifies mixed practice, builds a disciplined setup, and defends a final conclusion. - Solution note: A complete solution begins from mixed practice, applies the correct course method, and closes with a written interpretation that explains why the result is reasonable.

Homework answer key

Homework Set 1: Foundations and language

1. Complete a full digital literacy and citizenship problem centered on source evaluation. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for source evaluation, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on digital tools. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for digital tools, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on core vocabulary. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for core vocabulary, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on skill routines. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for skill routines, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

Homework Set 2: Reasoning and structure

1. Complete a full digital literacy and citizenship problem centered on digital tools. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for digital tools, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on online ethics. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for online ethics, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on method choice. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for method choice, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on explanation quality. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for explanation quality, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

Homework Set 3: Application and communication

1. Complete a full digital literacy and citizenship problem centered on online ethics. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for online ethics, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on information management. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for information management, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on application. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for application, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on communication. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for communication, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

Homework Set 4: Cumulative mastery

1. Complete a full digital literacy and citizenship problem centered on review. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for review, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on synthesis. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for synthesis, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on mixed practice. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for mixed practice, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

1. Complete a full digital literacy and citizenship problem centered on mastery exam. State the setup, the governing method, and the engineering conclusion you would defend.

- Answer / solution summary: A strong answer identifies the governing model for mastery exam, states assumptions explicitly, works through the key analytical steps, and closes with a technically defensible conclusion tied to the scenario.

Quiz answer key

Quiz 1: Foundations and language and Reasoning and structure

1. Which topic is a direct priority inside Foundations and language?

- Answer key: source evaluation. source evaluation is named directly in the Foundations and language study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Foundations and language?

- Answer key: digital tools. digital tools is named directly in the Foundations and language study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Reasoning and structure?

- Answer key: digital tools. digital tools is named directly in the Reasoning and structure study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Reasoning and structure?

- Answer key: online ethics. online ethics is named directly in the Reasoning and structure study block and is one of the required ideas for mastery in this course.

Quiz 2: Application and communication and Cumulative mastery

1. Which topic is a direct priority inside Application and communication?

- Answer key: online ethics. online ethics is named directly in the Application and communication study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Application and communication?

- Answer key: information management. information management is named directly in the Application and communication study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Cumulative mastery?

- Answer key: review. review is named directly in the Cumulative mastery study block and is one of the required ideas for mastery in this course.

1. Which topic is a direct priority inside Cumulative mastery?

- Answer key: synthesis. synthesis is named directly in the Cumulative mastery study block and is one of the required ideas for mastery in this course.

Mastery exam solution outlines

Digital Literacy and Citizenship cumulative mastery exam

1. Explain how source evaluation is used inside Digital Literacy and Citizenship to analyze or design around digital tools. Give the method, the assumptions that matter, and the conclusion you would stand behind.

- What to show: The governing principle behind source evaluation; A disciplined setup for digital tools; A clear engineering conclusion - Solution outline: A strong solution identifies the governing principle for source evaluation before jumping into algebra, computation, or design detail. The work should connect source evaluation to digital tools with explicit assumptions, a defensible setup, and a technically clear conclusion.

1. Explain how digital tools is used inside Digital Literacy and Citizenship to analyze or design around online ethics. Give the method, the assumptions that matter, and the conclusion you would stand behind.

- What to show: The governing principle behind digital tools; A disciplined setup for online ethics; A clear engineering conclusion - Solution outline: A strong solution identifies the governing principle for digital tools before jumping into algebra, computation, or design detail. The work should connect digital tools to online ethics with explicit assumptions, a defensible setup, and a technically clear conclusion.

1. Explain how online ethics is used inside Digital Literacy and Citizenship to analyze or design around information management. Give the method, the assumptions that matter, and the conclusion you would stand behind.

- What to show: The governing principle behind online ethics; A disciplined setup for information management; A clear engineering conclusion - Solution outline: A strong solution identifies the governing principle for online ethics before jumping into algebra, computation, or design detail. The work should connect online ethics to information management with explicit assumptions, a defensible setup, and a technically clear conclusion.

1. Explain how review is used inside Digital Literacy and Citizenship to analyze or design around synthesis. Give the method, the assumptions that matter, and the conclusion you would stand behind.

- What to show: The governing principle behind review; A disciplined setup for synthesis; A clear engineering conclusion - Solution outline: A strong solution identifies the governing principle for review before jumping into algebra, computation, or design detail. The work should connect review to synthesis with explicit assumptions, a defensible setup, and a technically clear conclusion.

1. Write a cumulative response that shows how a student in Digital Literacy and Citizenship should move from problem statement to defended result. Use the course outcomes to explain what high-quality work looks like.

- What to show: A staged engineering workflow; The assumptions or modeling choices that control the result; A defended final interpretation - Solution outline: A strong answer reflects the course outcome "Demonstrate control over source evaluation and digital tools inside Digital Literacy and Citizenship." and explains how disciplined setup, method choice, and interpretation fit together. The response should describe a full workflow, not isolated vocabulary words.
